EDUCATION

Northwestern University **Evanston, IL**

Bachelor of Arts (Major in Statistics and Data Science, Minor in Computer Science) ***GPA: 3.8/4.0*** Expected 06/2027

Relevant Coursework: Data Structures & Algorithms, Regression Analysis, Data Visualization, Scalable Software Architectures

Undergraduate TA: STAT 305 - Data Management and Information Processing, STAT 303-3 - Python for Data Science 3

PROFESSIONAL EXPERIENCE

Sony Music Publishing **New York, NY**

A&R Research & Analytics Intern *06/2026 - 08/2026*

- Designed the **data schema and underlying database** for an A&R data platform, resolving fragmented publisher data across >3 data sources into a unified structure with weekly refreshes, saving **10 hours per week** of A&R research effort.
- Conducted ad-hoc **SQL querying and analysis in Snowflake**, integrating song-, release-, and artist-level streaming data to support the **deal analysis team** on catalog acquisition (catalog decay rate), album momentum, and release analysis.
- Developed a **front-end research platform** for the database, designing for non-technical user experience through experimentation, enabling A&R teams to compare song momentum and ownership context **without ad-hoc analyst support**.
- Conducted weekly A&R research on emerging songwriters by integrating streaming signals, publishing records, and song metadata from **MLC, Chartmetric, and Luminate API**, contributing **5+** talents advancing to further A&R evaluation.
- Applied **LLM-based auto-research workflow** to analyze Billboard chart lifecycle patterns across decades, identifying streaming-era decay patterns and consumer behavior shifts influencing song longevity and breakout sustainability.

Live Nation Entertainment **Chicago, IL**

Ticketing & Pricing Analytics Intern *02/2026 - 05/2026*

- **Automated** a manual concert-data cleaning and processing workflow by refactoring existing **SAP BusinessObjects** queries and Excel scripts into a **repeatable ETL pipeline**, standardizing comparable-artist scaling data across venues and ticket tiers, allowing the Pricing team to reduce data extraction time by **2 hr / scaling project**.
- Partnered with ticketing stakeholders to define artist-scaling requirements and built an **all-in-one Tableau dashboard** centralizing pricing, venue, and ticket-tier **KPIs** for easier access and pricing decisions, reaching **40+ internal users**.
- Built **custom GPT** workflows to streamline recurring analysis and prototype new demand and pricing metrics, including artist-profile alignment measures for evaluating comparable shows and scaling behavior.

DeepManifold Inc. **New York, NY**

Machine Learning Engineer Intern *09/2025 - 01/2026*

- Helped transform a commercial banking client from rule-based segmentation to an **ML-driven customer intelligence platform**, building and evaluating embedding, graph, clustering and recommendation models including Word2Vec, GraphSAGE, and DIN.
- Collaborated with engineering and product teams to integrate learned customer embeddings into **personalized recommendation pipelines**, where online **A/B testing** achieved **+12% CTR, +9% CVR, and +7% uplift** for cold-start users vs. demographic baselines.

Pixocial | Human-First AI **Shenzhen, China**

Data Science Intern *06/2025 - 08/2025*

- Designed **an A/B test** for screen brightness optimization in **BeautyPlus (2M+ DAU)** using **BigQuery regression modeling**, achieving a **+0.3% retention lift** and driving full rollout across iOS and Android.
- Conducted feature analytics for the **AI Eraser launch**, analyzing core and guardrail metrics in **SQL/BigQuery** to reveal trade-offs between **subscription conversion and user experience**; insights informed product optimization and release strategy.
- Rebuilt **GenAI Creative dashboards** in **Looker Studio**, adding filter and portrait-conversion funnels, standardizing geo-filters, and refactoring **Airflow DAG logic** — reducing dashboard load time by **30%** and improving reliability for analytics teams.

PROJECT EXPERIENCE

Spotify Artist Growth Forecasting & AutoResearch System | Python, scikit-learn 03/2026 - 06/2026

- Built an automated research and forecasting pipeline to predict 30-day Spotify monthly-listener growth for K-pop artists, combining audience momentum, fan social engagement, playlist reach, release timing, and concert activity signals.
- Designed a hypothesis-driven model experimentation framework to systematically test artist-growth signals and feature interactions, improving validation RMSE from **1.86M to 1.32M listeners (~29%)** over the Ridge baseline.

SKILLS

Programming & Tools: SQL (Snowflake, BigQuery, MySQL), Python (pandas, NumPy, scikit-learn), R, Airflow, Git, Streamlit

BI & Visualization: Tableau, Looker Studio, SAP BusinessObjects, Excel, Matplotlib, Seaborn

Analytics Methods: A/B Testing, ETL Pipelines, Data Modeling, Regression Modeling, Causal Inference, LLM Workflows

Activities & Interests: Fusion Dance Company, Refresh Dance Crew, K-Pop concerts, running, choreography, traveling
